# Airex / Airoom **Hub** Install Process

Winter 20/21

1 | Setting up the AirEx hub

A. **Locate home internet router:**
   i. Ensure there is an available mains socket for powering the hub? If not use a 2-gang adaptor to create an extra socket.
   ii. Ensure there is there an available ethernet port? If not, consider connecting the hub to wi-fi.

B. **Place the home hub:**
   Due to the sensors included in the hub, where possible, position the hub as follows:
   - In the most used room of the property (i.e. living room)
   - Around chest height to read the average room temperature
   - Away from sources of heat (such as radiators or direct sunlight)
   - Away from windows and sources of ventilation
   - In good air circulation and not behind big objects (such as TVs)

C. **Connect AirEx hub to ethernet & power**
   i. Wait 30 secs for hub to boot up

D. **Verify hub responses on start-up**

LED Colour	LED behaviour	Diagnostic Information
🟢	Solid light	Hub successfully start-up and connected to the internet
🔵	Flashes for 1s	Hub successfully sent a message to database
🟠	Solid light	No connection to the internet - check connections & hard reset
🔴	Solid	Hub error - requires hub replacement
